

Dear reader,

Today, I cordially welcome you to the first issue of our newsletter "Infa-Aktuell". In the future, the newsletter is published three times a year.

"Infa-Aktuell" informs you about interesting customer projects, new products of Infastaub, innovative approaches to de-dusting in the different industries, events, etc.

We also introduce our employees to you. We want to give you an insight into the activities of your contact persons, with whom you deal often only by telephone or in written form or you didn't know anything about their function by now.

I invite you to look behind the curtain and the latest and future activities of Infastaub.

Yours

Berthold Geppert

Coal and coke is safely de-dusted

The Russian steel producer Nizhniy Tagil Iron and Steel Works (NTMK) produces steel since the early 18th century. Currently a facility is built for preparing and blowing the coal dust into the blast furnaces to raise the iron production. Infastaub received the order for seven de-dusting units of the series AJN from his Russian partner SovPlym. These filters remove the dust from the preparation process before the coal is conveyed to the blast furnaces. The pocket filters were mounted and commissioned last year step-by-step.

They are dimensioned for volume flows from 6,000 to 24,000 m³/h and have an entire filter surface of 960 m². Because of the danger of a dust explosion the filters were built in pressure shock resistant design. Because of the installation in the central inside area of the building a relief of a potential explosion to the outside atmosphere via rupture discs is not possible. Therefore, a flameless pressure relief was realised with special relief valves. A dust monitor supervises the flawless function of the filter elements and releases alarm, if the allowed clean gas dust concentration is exceeded.

Powtech 2013

It is almost time:

On Tuesday, April 23rd, 2013 the POWTECH 2013 starts in Nuremberg.

Visit us on our stand 341 in hall 5!

We offer you competent consultation, interesting product novelties and a soccer table for a small rest during the fair stress! The highlight: You can win this soccer table for your company!

Take part in our competition „Quick exchange of filter cartridges at the AJP 224P“. The fastest candidate wins the soccer table.

If you need free tickets for the Powtech, send your ticket request by e-mail: marketing@infastaub.de

Your visit is worth it in any case!

What is actually doing ...?

Stephan Ziegler Customer Service Manager

The 52-year-old master craftsman for machines and mill construction has dressed different positions at Infastaub during his 23 year activity in the company. In 1990 he started first as an assistant of the production management at Infastaub.

Later he became a works manager of Infastaub's plant II and since 2010 he puts his effort to intensify the customer service. At the same time Stephan Ziegler looks after the efficient and solution oriented handling of customer claims. His many years' experience from the production helps him for this job.

I: You have already worked many years for Infastaub. Does your job still fulfill you with joy?

Z: Oh yes. Because there is no monotony within my duties. We have to manage new challenges daily, have to be quick and organised as well when carrying out service and maintenance at our filters or when looking after claims. It is important to me, that we impress our customers with our performance. You have to improvise sometimes, if help is needed quickly. It is nice that we receive a lot of positive feedback from our customers for our work. That motivates.

I: How do you gain new energy after a hectic work day?

Z: I find my balance with my hobbies. My motor cycles and my flight simulator. Yearly I am on the road about 25.000 km with my machines. And I explore the world from the sky when flying with the simulator. Basically the flight simulator complies with the reality: Take-offs, landings, flight routes, aerodynamic, etc. Right now I am bound for British Columbia.

Stephan Löbig Head of technical department

Stephan Löbig works at Infastaub for 5 years now. In summer 2012 he took over the management of the technical department with the divisions construction, documentation, production and service from Walter Hungershausen. Before the graduated processing engineer worked as head of construction.

Besides guiding the team, among his duties are new developments, the technical improvements of the filter systems, the coordination of the technical order processing and the quality management. At the moment a big challenge lies within the change of the CAD system to the program Solid Works, to make the data exchange with clients easier.

I: Besides Solid Works you actually implement also an ERP-system. These are massive changes.

L: The timely realisation of these ambitious development projects is only possible, because we have

colleagues, who work on the implementation with great engagement.

I: What is best at your job?

L: The changing duties. These bring along our different products and the different demands of our clients, which we fulfill with lots of ambition. At the moment the topic „explosion protection“ is very present, because we engaged a designated expert of explosion protection and train, inform and sensibilize our clients about this critical topic.

I: How do you manage the balance between free time and job?

L: First of all with my family. I also go in for sports and try to play tennis once or twice a week. I though find my best „work-life-balance“ singing in the choir.

Again best grade for Infastaub at Hoppenstedt Top-Rating

Also in 2013 the rating agency Hoppenstedt GmbH has awarded the Infastaub GmbH its top rating certificate within the scope of the Hoppenstedt CreditChecks.

Therewith the Infastaub GmbH counts once more with a rating index of 1 to the best valued companies in the Federal Republic of Germany. Only 4.9% of the checked companies receive this ranking. Already last year the Infastaub GmbH was ranked by Hoppenstedt with grade 1.
